Team Software

Team Software is a venture of Team Group with a well established and satisfied clientele has been in the field of Designing and Developing, Commercial Business Application Software for over a decade. **Team Group ventured into software development deeply understanding the problems of conventional software development and to overcome the same by using A.I. to save on time and to manage the changes effectively.** Team Group having business experience of more than 3 decades with deep domain knowledge and access to resources both from a technical and business perspective ventured into software development, which gives it a natural edge over other software organizations.

From a technical perspective Team Software has established skills in various technologies while specializing in applications around Microsoft Technologies. The Company has developed software for the Service Oriented industry keeping in mind the needs of the customer, has a 100% success rate with all its clients.

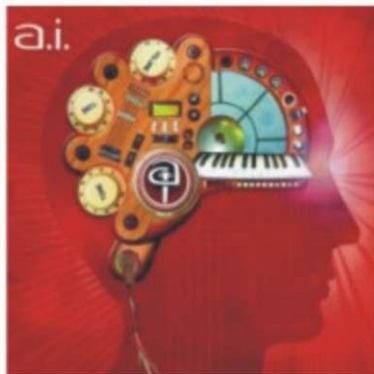

Technology

Pioneering Into The Field of Artificial Intelligence

Having been in the field of developing business critical applications for over a decade, Team Software understands the importance of providing Robust, Stable, Easy to deploy and Bug free Software Applications and its impact on business.

Team Software has addressed this requirement by investing in development of Application Software using its own Artificial Intelligence based Software Development tool **“OMEGA”**

Omega - IT Solutions Mastered by AI.

Developed by Team Software after an intensive Research, analysis and Study of the customer trends has led the company to new frontiers.

Using the Artificial Intelligence (AI) - Fuzzy Logic based development technology, which gives leading edge in Independent design and development with built in Intelligence for various application softwares with maximum flexibility, scalability to suit the complex and ever changing customer needs.

OMEGA supports MS Access / MS SQL / MySQL / Oracle or any other RDBMS. The Development of Cross Language support of Softwares is being considered to increase its acceptability by even those

who have short insight into the software field or People who do not want to use third party development tools. Currently Omega supports ASP, PHP, C#.NET. Support for any other programming languages can be considered based on customer requirements

Our Products have simple easy to use functional based screens, which can be learnt in a short time. They are standardized, structured and uniform screens, which enables for faster implementation and training. The complete utilization of the functionalities of the software enables maximum resource utilization.
